What is the future of Astifan System?

In order to give the user full online control the system still need improvements. Many powerful features planned to be included with the system.

System Store

The store will contain templates, scripts, actions and services posted by the community or me to help the users from using advanced features without writing any code

Templates Editor

The user will be able to edit any template or customize new template using advanced interface using controls only without writing any code

Payments Portal

The system will be able to provide paid services (Products, Subscriptions..etc)

Nodes Map

The user will be able to organize website contents using connected nodes so it will be very easy to move contents from section to another

Desktop/Mobile Client

This feature will let you manage your website and services from you mobile or desktop with more advanced options than the current web control panel

Mailing Service

The system will be able to communicate with desktop services to reduce the load on the webserver and this service will let you create custom mailing triggers to communicate with the visitors and users about news or updates

Smart View

Smart View will reduce your website page size to the lowest it will show only the content in your view area so whatever your page content big is.. it doesn't matter

Template Pixel

This Feature will help the user to customize templates by screen size (8K, 4K, 2K, Desktop, Tablet, Mobile)

Statistics V2

The user will be able to customize new reports and statistics based on his needs

Media Editor

The user will be able to edit and manage media (Photos/Videos) inside the control panel using powerful and advanced editor

Translation Tool

The user will be able to translate any page directly with smart and advanced assistant

Files Manager V2

Huge upgrade will be added to the current files manager so the user can do most of the work inside the control panel without using alternative tools

Cache Manager V2

More smart algorithms will be added to the cache manager so your website can handle more requests at the same time

Search Engine V2

Update the search engine to get better results, search types will be added (Content, Video, Images..etc)

Translation Engine V2

Add enhancements to the current translation engine

Comments V2

Add enhancements and new features to the current comments system

API V2

Add enhancements and new features to the current API engine

System Users

The admin will be able to customize new levels for users with specific permissions for better management

Direct Actions

The user will be able to update single value related to a content (date, title, tags..etc) directly so it will be much faster when you need to change single value

Libraries Manager V2

Add enhancements and resolutions to the current libraries (JS, CSS) manager, add new compression and encryption algorithms to reduce the libraries size and increase the security
